

Introduction to SharePoint Development

This two-day workshop is aimed at existing .NET developers that wish to extend their skills into developing for Microsoft SharePoint. SharePoint development is a growth area for .NET developers with many organisations looking to integrate their existing systems with SharePoint. This course has been developed to help fast track a developer into how to best design, develop and deploy custom components into SharePoint. The course will also examine how to best create a development environment to facilitate SharePoint development and how to integrate SharePoint development into your development processes. The course is designed as a hands-on workshop so that attendees have an opportunity to apply their knowledge as soon as they get back to the workplace.

Who Should Attend:

This course is aimed at experienced .NET developers looking to make a start developing for SharePoint Technologies.

Pre-requisites:

- Minimum 12 months experience with VB.NET or C#
- Basic SharePoint knowledge

Course Objectives:

After completing the course, students will be able to:

- Identify the components of Microsoft SharePoint architecture and how these are used to improve collaboration and increase the efficiency of information workers
- Identify key benefits of custom development in Microsoft SharePoint
- Create basic custom Webparts

Course Outline:

Module 1: Introducing SharePoint development

Module 2: Creating a Development environment

Module 3: Design, develop, and deploy solutions

Module 4: Working with Windows Workflow

Module 5: Building and deploying custom Webparts

Module 6: Custom fields and event handlers

Module 7: Integrating AJAX and Silverlight

Module 8: Integrating SharePoint development into your SDLC
